

SLAVERY

For nearly 250 years, the existence of slavery deprived African Americans of independent lives and individual liberty. It also compromised the republican dreams of white Americans, who otherwise achieved unprecedented success in the creation of political institutions and social relationships based on citizens' equal rights and ever-expanding opportunity.

Thomas Jefferson, who in 1787 described slavery as an "abomination" and predicted that it "must have an end," had faith that "there is a superior bench reserved in heaven for those who hasten it." He later avowed that "there is not a man on earth who would sacrifice more than I would to relieve us from this heavy reproach in any *practicable* way." Although Jefferson made several proposals to curb slavery's growth or reduce its political or economic influence, a workable plan to eradicate slavery eluded him. Others also failed to end slavery until finally, after the loss of more than 600,000 American lives in the Civil War, the United States abolished it through the 1865 ratification of the Thirteenth Amendment to the Constitution.

American slavery and American freedom took root at the same place and at the same time. In 1619—the same year that colonial Virginia's House of Burgesses convened in Jamestown and became the New World's first representative assembly—about 20 enslaved Africans arrived at Jamestown and were sold by Dutch slave traders. The number of slaves in Virginia remained small for several decades, however, until the first dominant labor system—indentured servitude—fell out of favor after 1670. Until then indentured servants, typically young and landless white Englishmen and Englishwomen in search of opportunity, arrived by the thousands. In exchange for passage to Virginia, they agreed to labor in planters' tobacco fields for terms usually ranging from four to seven years. Planters normally agreed to give them, after their indentures expired, land on which they could establish their own tobacco farms. In the first few decades of settlement, as demand for the crop

boomed, such arrangements usually worked in the planters' favor. Life expectancy in Virginia was short and few servants outlasted their terms of indenture. By the mid-1600s, however, as the survival rate of indentured servants increased, more earned their freedom and began to compete with their former masters. The supply of tobacco rose more quickly than demand and, as prices decreased, tensions between planters and former servants grew.

These tensions exploded in 1676, when Nathaniel Bacon led a group composed primarily of former indentured servants in a rebellion against Virginia's government. The rebels, upset by the reluctance of Governor William Berkeley and the gentry-dominated House of Burgesses to aid their efforts to expand onto American Indians' lands, lashed out at both the Indians and the government.

After several months the rebellion dissipated, but so, at about the same time, did the practice of voluntary servitude.

In its place developed a system of race-based slavery. With both black and white Virginians living longer, it made better economic sense to own slaves, who would never gain their freedom and compete with masters, than to rent the labor of indentured servants, who would. A few early slaves had gained their freedom, established plantations, acquired servants, and enjoyed liberties shared by white freemen, but beginning in the 1660s Virginia's legislature passed laws banning interracial marriage; it also stripped African Americans of the rights to own property and carry guns, and it curtailed their freedom of movement. In 1650 only about 300 blacks worked Virginia's tobacco fields, yet by 1680 there were 3,000 and, by the start of the eighteenth century, nearly 10,000.

Slavery surged not only in Virginia but also in Pennsylvania, where people abducted from Africa and their descendants harvested wheat and oats, and in South Carolina, where by the 1730s rice planters had imported slaves in such quantity that they accounted for two-thirds of the population.

The sugar-based economies of Britain's Caribbean colonies required so much labor that, on some islands, enslaved individuals outnumbered freemen by more than ten to one. Even in the New England colonies, where staple-crop agriculture never took root, the presence of slaves was common and considered unremarkable by most.

Historian Edmund S. Morgan has suggested that the prevalence of slavery in these colonies may have, paradoxically, heightened the sensitivity of white Americans to attacks against their own freedom. Thus, during the crisis preceding the War for Independence Americans frequently cast unpopular British legislation—which taxed them without the consent of their assemblies, curtailed the expansion of their settlements, deprived them of the right to jury trials, and placed them under the watchful eyes of red-coated soldiers—as evidence of an imperial conspiracy to “enslave” them. American patriots who spoke in such terms did not imagine that they would be forced to toil in tobacco fields; instead, they feared that British officials would deny to them some of the same individual and civil rights that they had denied to enslaved African Americans. George Mason, collaborating with George Washington, warned in the Fairfax Resolves of 1774 that the British Parliament pursued a “regular, systematic plan” to “fix the shackles of slavery upon us.”

As American revolutionaries reflected on the injustice of British usurpations of their freedom and began to universalize the individual rights that they had previously tied to their status as Englishmen, they grew increasingly conscious of the inherent injustice of African-American slavery. Many remained skeptical that blacks possessed the same intellectual capabilities as whites, but few refused to count Africans as members of the human family or possessors of individual rights. When Jefferson affirmed in the Declaration of Independence “that all men are created equal,” he did not mean all *white* men. In fact, he attempted to turn the Declaration into a platform from which Americans would denounce the trans-Atlantic slave trade. This he blamed on Britain and its king who, Jefferson wrote, “has waged cruel war against human nature itself, violating it's [sic] most sacred rights of life and liberty in the persons of a distant people who never offended him, captivating & carrying them into slavery in another hemisphere.”

The king was wrong, he asserted, “to keep open a market where MEN should be bought & sold.” Delegates to the Continental Congress from South Carolina and Georgia, however, vehemently opposed the inclusion of these lines in the Declaration of Independence. Representatives of other states agreed to delete them. Thus began, at the moment of America's birth, the practice of prioritizing American unity over black Americans' liberty.

Pragmatism confronted principle not only on the floor of Congress but also on the plantations of many prominent revolutionaries. When Jefferson penned his stirring defense of individual liberty, he owned 200 enslaved individuals. Washington, the commander-in-chief of the Continental Army and future first president, was

In 1650 only about 300 African Americans worked Virginia's tobacco fields, yet by 1680 there were 3,000; by the start of the eighteenth century, there were nearly 10,000.

one of the largest slaveholders in Virginia. James Madison—who, like Jefferson and Washington, considered himself an opponent of slavery—was also a slaveholder. So was Mason, whose Virginia Declaration of Rights stands as one of the revolutionary era's most resounding statements on behalf of human freedom. Had these revolutionaries attempted to free their slaves, they would have courted financial ruin. Alongside their landholdings, slaves constituted the principal asset against which they borrowed. The existence of slavery, moreover, precluded a free market of agricultural labor; they could never afford to pay free people—who could always move west to obtain their own farms, anyway—to till their fields.

Perhaps the most powerful objection to emancipation, however, emerged from the same set of principles that compelled the American revolutionaries to question the justice of slavery. Although Jefferson, Washington, Madison, and Mason considered human bondage a clear violation of individual rights, they trembled when they considered the ways in which emancipation might thwart their republican experiments. Not unlike many nonslaveholders, they considered especially fragile the society that they had helped to create. In the absence of aristocratic selfishness and force, revolutionary American governments relied on virtue and voluntarism. Virtue they understood as a manly trait; the word, in fact, derives from the Latin noun *vir*, which means “man.” They considered men to be independent and self-sufficient, made free and responsible by

habits borne of necessity. Virtuous citizens made good citizens, the Founders thought. The use of political power for the purpose of exploitation promised the virtuous little and possessed the potential to cost them much. Voluntarism was virtue unleashed: the civic-minded, selfless desire to ask little of one's community but, because of one's sense of permanence within it, to give much to it. The Founders, conscious of the degree to which involuntary servitude had rendered slaves dependent and given them cause to resent white society, questioned their qualifications for citizenship. It was dangerous to continue to enslave them, but perilous to emancipate them. Jefferson compared it to holding a wolf by the ears.

These conundrums seemed to preclude an easy fix. Too aware of the injustice of slavery to expect much forgiveness from slaves, in the first decades of the nineteenth century a number of Founders embarked on impractical schemes to purchase the freedom of slaves and "repatriate" them from America to Africa. In the interim, debate about the continued importation of slaves from Africa stirred delegates to the Constitutional Convention. South Carolina's Charles Pinckney vehemently opposed prohibitions on the slave trade, arguing that the matter was best decided by individual states. The delegates compromised, agreeing that the Constitution would prohibit for twenty years any restrictions on the arrival of newly enslaved Africans. As president, Jefferson availed himself of the opportunity afforded by the Constitution when he prohibited the continued importation of Africans into America in 1808. Yet he had already failed in a 1784 attempt to halt the spread of slavery into the U.S. government's western territory, which stretched from the Great Lakes south toward the Gulf of Mexico (the compromise Northwest Ordinance of 1787 drew the line at the Ohio River), and in his efforts to institute in Virginia a plan for gradual emancipation (similar to those that passed in Northern states, except that it provided for the education and subsequent deportation of freed African Americans). Of all the Founders, Benjamin Franklin probably took the most unequivocal public stand against involuntary servitude when, in 1790, he signed a strongly worded antislavery petition submitted to Congress by the Pennsylvania Abolition Society. This, too, accomplished little.

The revolutionary spirit of the postwar decade, combined with the desire of many Upper South plantation owners to shift from labor-intensive tobacco to wheat, created opportunities to reduce the prevalence of slavery in America—especially in the North. Those opportunities not seized upon—especially in the South—would not soon return.

Eli Whitney's invention of the cotton gin in 1793 widened the regional divide. By rendering more efficient the processing of cotton fiber—which in the first half of the nineteenth century possessed a greater value than all other U.S. exports combined—Whitney's machine triggered a resurgence of Southern slavery. Meanwhile, the wealth that cotton exports brought to America

fueled a booming Northern industrial economy that relied on free labor and created a well-educated middle class of urban professionals and social activists. These individuals kept alive the Founders' desire to rid America of

slavery, but they also provoked the development of Southern proslavery thought. At best, Southerners of the revolutionary generation had viewed slavery as a necessary evil; by the 1830s, however, slaveholders began to describe it as a positive good. African Americans were civilized Christians, they argued, but their African ancestors were not. In addition, the argument continued, slaves benefited from the paternalistic care of masters who, unlike the Northern employers of "wage slaves," cared for their subordinates from the cradle to the grave. This new view combined with an older critique of calls for emancipation: since slaves were the property of their masters, any attempt to force their release would be a violation of masters' property rights.

Regional positions grew more intractable as the North and South vied for control of the West. Proposals to admit into statehood Missouri, Texas, California, Kansas, and Nebraska resulted in controversy as Northerners and Southerners sparred to maintain parity in the Senate. The 1860 election to the presidency of Abraham Lincoln, a Republican who opposed the inclusion of additional slave states, sparked secession and the Civil War.

"I tremble for my country when I reflect that God is just," Jefferson had prophetically remarked, for "his justice cannot sleep for ever." Americans paid dearly for the sin of slavery. Efforts by

members of the founding generation failed to identify moderate means to abolish the practice, and hundreds of thousands died because millions had been deprived of the ability to truly live.

FREEDOM OF RELIGION

A sound understanding of the United States requires an appreciation of the historical commitment of the American people to certain fundamental liberties. High on the list of these liberties is freedom of religion. The image of brave seventeenth-century English Puritans making the difficult journey across the Atlantic to American shores in pursuit of the freedom to live according to their faith is a powerful part of the American myth. Less remembered, however, is the fact that the commonwealth established by the Puritans was as intolerant as Anglican England, from which they had fled. Indeed, the road to achieving full religious liberty in the United States was long and arduous. By the time of the writing of the United States Constitution in 1787, Americans were committed to the principle of religious tolerance (or, to use the term of the time, “toleration”) and the idea of separation of church and state, but only to a limited degree. It would be another five decades before all states granted broad religious liberty to their citizens and provided for the complete separation of church and state.

Modern ideas about freedom of religion were developed in the wake of the Protestant Reformation of the sixteenth century, which shattered the unity of Christendom and plunged Europe into political and religious conflict. Though some European states remained religiously homogeneous, either retaining the traditional faith of Roman Catholicism or adopting some brand of Protestantism, religious division within many countries led to discord and bloodshed. In England, the church established in the mid-sixteenth century by King Henry VIII (who reigned from 1509 to 1547) faced stiff resistance, first from the many Catholics who refused to abandon the faith of their ancestors, and then from the Puritans who opposed the rule of bishops and wanted to purify the church so that it included only the elect.

Henry VIII’s successors, Elizabeth I (1558–1603) and James I (1603–1625), successfully quelled opposition to the Church of England (the Anglican

Church), largely through harsh persecution of dissenters. In 1642, however, England was engulfed by religious civil war, from which the Puritans emerged victorious. The Puritan Commonwealth established by Oliver Cromwell ruthlessly persecuted Anglicans and Catholics. But Puritan rule was short-lived. An Anglican monarch, Charles II, was restored to the throne in 1660.

This “settlement” of the religious crisis, however, was threatened by the accession of a Catholic, James II, to the throne in 1685. Anxious Protestants conspired and invited a foreigner, William of Orange, to assume the kingship of England. William invaded England, drove James into exile, assumed the throne, and reestablished the Church of England as the national church.

In this contentious atmosphere some English political thinkers, such as John Locke, began to advocate a policy of religious

toleration. Locke’s ideas reflected a key assumption of Enlightenment thought—that religious belief, like political theory, is a matter of opinion, not absolute truth. “The business of laws,” Locke wrote in his *Letter on Toleration* (1689), “is not to provide for the truth of opinions, but for the safety and security of the commonwealth and of every particular man’s goods and person.” Public security was in no way dependent on a uniformity of religious belief among the citizenry. “If a Jew do not believe the New Testament to be the Word of God,” Locke stated, “he does not thereby alter anything in men’s civil rights.” Rather, intolerance led to “discord and war,” and Locke warned that “no peace and security” could be “preserved amongst men so long as this opinion prevails . . . that religion is to be propagated by force of arms.” Religious belief, in Locke’s view, was a matter of individual choice, a matter for society, not for government.

Locke’s views on religious liberty had a profound influence on American thinking in the next century. Other writings, however, particularly the Bible, had at least as great an impact on American political theory. Indeed, the American experiment in religious toleration began years before the publication of

Locke's treatise, though the early history of Puritan Massachusetts Bay was hardly indicative of the course that toleration would take in America. Established by John Winthrop in 1630, Massachusetts was a repressive place where church and state were one and where religious dissent was ruthlessly stamped out. Dissenters had few options: they could be silent, suffer persecution, or leave the colony. Roger Williams, a freethinking preacher, was forced to choose this last option, leaving Massachusetts in 1636 to establish the colony of Rhode Island.

In Rhode Island, Williams instituted toleration for all people, and his new colony quickly became a refuge for persecuted groups like Quakers and Baptists. Williams's case for toleration was at least as radical as Locke's. Basing his arguments on the Bible, Williams insisted that the Jews, Muslims, and atheists were also deserving of religious liberty. The only "sword" to be used in fighting their opinions was scripture itself. Intolerance was an offense to God. "An enforced uniformity of religion throughout a nation or civil state," Williams wrote in *The Bloudy Tenent of Persecution* (1644), "denies the principles of Christianity." Williams argued that forced belief was not only a violation of God's law but also an unwise policy. "Enforced uniformity (sooner or later) is the greatest occasion of civil war, ravishing of conscience, persecution of Christ Jesus in his servants, and of the hypocrisy and destruction of millions of souls."

Two years before the founding of Rhode Island, Cecil Calvert founded the colony of Maryland and proclaimed toleration for all Christians. Calvert himself was a Catholic, but he knew that the viability of his colony depended on luring enough Protestant settlers to make it an economic success. A policy of toleration, he hoped, would serve this purpose. In setting up Pennsylvania in the 1680s, William Penn, a Quaker, followed a similar course, making his colony a haven not only for his fellow coreligionists, but, like Rhode Island, a refuge for people of all religious sects.

Pennsylvania and Rhode Island would preserve uninterrupted their traditions of religious liberty, but in Maryland, freedom of religion would be curtailed for Catholics once Protestants came to power in the last decade of the seventeenth century. Still, the idea that some degree of religious liberty was a healthful policy for government became

firmly rooted in America by the eighteenth century. Americans learned from the example of seventeenth-century England that religious persecution was ultimately detrimental to the political, social, and economic welfare of the nation. In America, where the Christian sects were more numerous than in England, the repercussions of religious intolerance would be especially adverse to the nation's prospects. Americans' devotion to religious freedom, then, was a product of necessity and experience as well as reason.

The crisis of empire during the 1760s and 1770s served to strengthen the American commitment to religious liberty. It was not only the intrusive economic measures passed by Parliament during these years that alarmed Americans. Patriot leaders also warned of the danger of the Anglican

Locke warned that "no peace and security" could be "preserved amongst men so long as this opinion prevails . . . that religion is to be propagated by force of arms."

Church's interference in American religious affairs. There was much talk that the British government would install a bishop in America who would become the instrument of tyranny. This idea that political and religious liberty went hand in hand was reflected in the New York Constitution of 1776, which explicitly connected "civil tyranny" with "spiritual oppression and intolerance."

Nearly all the state constitutions written during the American independence movement reflected a commitment to some degree of religious liberty. The Massachusetts Constitution of 1780 promised that "no subject shall be hurt, molested, or restrained, in his person, liberty, or estate, for worshipping God in the manner and season most agreeable to the dictates of his own conscience." The Virginia Declaration of Rights of 1776, authored by George Mason, proclaimed "That Religion or the duty which we owe to our Creator and the manner of discharging it, can be directed only by reason and conviction, not by force or violence." Mason's ideas mirrored Locke's belief that government should not intrude upon the concerns of society.

But many states limited religious liberty to Christians in general, or to Protestants in particular. The North Carolina Constitution of 1776 decreed "That no person, who shall deny the being of God or the truth of the Protestant religion . . . shall be capable of holding any office or place of trust or profit in the civil department within this State." Similarly, the New Jersey Constitution of the same year declared that "there

shall be no establishment of any one religious sect in this Province, in preference to another,” but promised Protestants alone full civil rights. Thanks largely to the efforts of Charles Carroll of Carrollton, a Roman Catholic, Maryland’s Revolutionary Constitution was more liberal in its guarantee of religious liberty to “all persons, professing the Christian religion.”

The Protestant majority in America was indeed particularly concerned about the Catholic minority in its midst. Catholics constituted the largest non-Protestant creed in the country, and it was believed that Catholicism demanded loyalty to the pope above devotion to country. The connection between Catholicism and absolutism was deeply ingrained in the American Protestant mind and was a legacy of the Reformation, which Protestants saw as a period of liberation from the ignorance, superstition, and tyranny of the Roman Catholic Church. During the crisis with England, a wave of religious hysteria swept over American Protestants, who worried that the pope would personally lead the Catholics of Canada in a military assault on American forces. “Much more is to be dreaded from the growth of Popery in America,” patriot leader Samuel Adams asserted in 1768, “than from Stamp-Acts or any other acts destructive of men’s civil rights.” This bigotry caused Roman Catholics to become outspoken proponents of religious toleration and the separation of church and state. In a country dominated by Protestants, this was the only realistic course for them.

All thirteen states at the time of American independence, then, acknowledged to some degree in their constitutions the principle of religious liberty. Most also provided for some degree of separation of church and state. Several states went so far as to prohibit clergymen from holding state office, a restriction in the Georgia Constitution of 1777 that the Reverend John Witherspoon of New Jersey would famously protest. But few states provided for a complete separation of church and state, for it was believed that the government should give some support to religion in general. Though a substantial number of American elites in the late eighteenth century were not church-going Christians, nearly all believed in the God of the Old Testament, and all recognized the practical value of Christianity as a check on antisocial behavior. Many of the state constitutions written

in the era of independence, therefore, required that government give some support to Christianity. Though the Massachusetts Constitution guaranteed that “no subordination of any one sect or denomination to another shall ever be established by law,” it also permitted the legislature to levy taxes “for the support and maintenance of public protestant teachers of piety, religion and morality.” Similarly, the Maryland Constitution of 1776 permitted the legislature to “lay a general and equal tax for the support of the Christian religion.”

There were, however, calls for complete religious disestablishment at the state level. In Virginia, James Madison and Thomas Jefferson were two of the most prominent advocates of a

strict separation of church and state. Their ideas about religious liberty were clearly influenced by John Locke and fellow Virginian George Mason. In 1785, the Virginia legislature considered a bill that would provide for public funding of Christian

Thomas Jefferson asserted that the First Amendment created “a wall of separation between church and state.” What Jefferson meant by this term is a subject of great debate.

instruction. The measure was backed by several prominent statesmen, including Patrick Henry. But James Madison, then a member of the legislature, took the lead in opposing the bill, reminding Virginians that “torrents of blood have been spilt in the old world, by vain attempts of the secular arm, to extinguish Religious discord, by proscribing all difference in Religious opinion.” The bill was defeated, and the following year, Jefferson introduced “A Bill for Establishing Religious Freedom,” which attempted to enshrine in law the idea “that no man shall be compelled to frequent or support any religious Worship place or Ministry whatsoever.” The bill passed with minor changes.

By the time of the Constitutional Convention of 1787, there was a broad consensus regarding the proper relationship between the national government and religion: first, that the government ought not to give support to any religious sect; second, that the government ought not to require a religious test for office; third, that the government ought not to interfere with private religious practice; and fourth, that the government ought not to interfere with the right of the states to do as they wished in regard to religious establishment and religious liberty. These points of consensus were reflected in both the body of the United States Constitution and in the First Amendment, which was ratified in 1791 as part of the Bill of Rights. Article VI of the Constitution explicitly stated that

“no religious test shall ever be required as a qualification to any office or public trust under the United States.” The First Amendment declared that “Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.”

The right of the states to set their own policy in regard to religion was implicitly acknowledged in Article I of the Constitution, which stipulated that to be eligible to vote in elections for the United States House of Representatives, “the elector in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.” Several states at the time mandated a religious test as a requirement for the franchise, and the Constitution therefore tacitly approved such tests. In addition, the First Amendment’s prohibition against religious establishment applied explicitly to the national Congress alone. Indeed, it was not until after the American Civil War, in the incorporation cases, that the United States Supreme Court ruled that some of the restrictions placed on the federal government by the amendments also applied to the state governments.

By 1800, then, there was a broad consensus among Americans that religious freedom was essential to political liberty and the well-being of the nation. During the next two centuries, the definition of freedom of religion would be broadened, as states abandoned religious tests and achieved complete disestablishment and as state and federal courts ruled that various subtle forms of government encouragement of religion were unconstitutional. Shortly after the dawn of the nineteenth century, in a letter to a Baptist congregation in Danbury, Connecticut, Thomas Jefferson asserted that the First Amendment created “a wall of separation between church and state.” What Jefferson meant by this term is a subject of great debate. But there is no doubt that his words have become part of the American political creed and a rallying cry for those who seek to expand the definition of religious liberty, even to mean that religion should be removed from public life altogether.

LIBERTY

Liberty was the central political principle of the American Revolution. As Patrick Henry, one of its staunchest supporters, famously intoned, “Give me liberty or give me death.” Henry was not alone in his rhetorical fervor. Indeed, no ideal was proclaimed more often in the eighteenth-century Anglo-American world than liberty.

The idea of liberty defended by the American Founders came from several sources. The most venerable was English common law. Beginning in the late medieval period, writers in the common law tradition developed an understanding of liberty which held that English subjects were free because they lived under a system of laws which even the Crown was bound to respect. Leading English jurists argued that these legal limits on royal power protected the subject’s liberty by limiting the arbitrary use of political power.

Under English common law, liberty also consisted in the subject enjoying certain fundamental rights to life, liberty and property. William Blackstone (1723–1780), the leading common lawyer of the eighteenth century, argued that these rights allowed an English subject to be the “entire master of his own conduct, except in those points wherein the public good requires some direction or restraint . . .” For Blackstone, these English rights further protected the subjects’ liberty by making them secure in their persons from arbitrary search and seizure, and by ensuring that their property could not be taken from them without due process of law.

In order to preserve these fundamental rights, the English common law allowed the subject the right to consent to the laws that bound him by electing representatives to Parliament whose consent the monarch had to obtain before acting.

Common lawyers in the seventeenth and eighteenth centuries did not view these rights and the liberty they protected as the gift or grant of the monarch; rather, they believed that they were an Englishmen’s “birthright,” something that inhered in each subject and that therefore could not be taken away by royal prerogative.

This common law understanding of liberty was central to the seventeenth-century struggles against the Stuart monarchy. Prominent jurists and Parliamentarians such as Edward Coke (1552–1634) took the lead in the attempt to limit what they saw as the illegal and arbitrary nature of the Stuarts’ rule. This struggle culminated in the Glorious Revolution

of 1689 and the triumph of Parliamentary authority over the Crown. For champions of English liberty, the result of this century-long struggle was the achievement of political liberty. They further argued that, as a result of this struggle, Britain in the eighteenth century had the freest constitution in the world. According to the French writer Montesquieu (1689–1755), Britain was “the only nation in the world, where political and civil liberty” was “the direct end of the constitution.”

This seventeenth century struggle between royal power and the subject’s liberties made a great impression on the American Founders. They absorbed its lessons about the nature and importance of liberty through their reading of English history as well as through their instruction in English law.

A second and equally influential understanding of liberty was also forged in the constitutional battles of the seventeenth century: the idea that liberty was a natural right pertaining to all. The foremost exponent of this understanding of liberty in the English-speaking world was John Locke (1632–1704). Locke’s political ideas were part of a wider European political and legal movement which argued that there were certain rights that all men were entitled to irrespective of social class or creed.

Like the common lawyers, Locke saw liberty as centrally about the enjoyment of certain rights. However, he universalized the older English understanding of liberty, arguing that it applied to all persons, and not just to English subjects. Locke also expanded the contemporary understanding of liberty by arguing that it included other rights—in particular a right to religious toleration (or liberty of conscience), as well as a right to resist governments that violated liberty. In addition, Locke argued that the traditional English common

law right to property was also a natural right, and was an important part of the subject's liberty.

Locke began his political theory by arguing that liberty was the natural state of mankind. According to Locke, all men are “naturally” in a “State of perfect Freedom to order” their “Actions, and dispose of their Possessions, and Persons as they think fit, within the bounds of the Law of Nature, without asking leave, or depending upon the Will of any other Man.”

However, Locke did not argue that this natural liberty was a license to do whatever we want.

“Freedom is not,” he argued, “A Liberty for every Man to do what he lists (For who could be free, when every other Man’s humour might domineer over him?).” Rather, Locke held that since all men are “equal and independent, no one ought to harm another in his Life, health, Liberty, or Possessions.” According to Locke, each of us has “an uncontrollable Liberty to dispose of our persons and possession,” but we do not have the right to interfere with the equal liberty of others to do the same.

In Locke’s political theory, men enter into society and form governments to better preserve this natural liberty. When they do so, they create a political system where the natural law limits on liberty in the state of nature are translated into a legal regime of rights. In such a system, Locke argued, each person retains his “Liberty to dispose, and order, as he lists, his Person, Actions, Possession, and his whole Property, within the Allowance of those Laws under which he is; and therein not to be subject to the arbitrary Will of another, but freely follow his own.”

For Locke, as for the common lawyers, the rule of law was necessary for liberty. In Locke’s view, “the end of law is not to abolish or restrain, but to preserve and enlarge Freedom.” According to Locke, “Where there is no Law, there is no Freedom. For Liberty is to be free from restraint and violence from others which cannot be, where there is no law.”

Building on both the English common law and on Locke’s ideas, the eighteenth-century English writer Cato argued “that liberty is the unalienable right of mankind.” It is “the power which every Man has over his own Actions, and his Right to enjoy the Fruit of his Labour, Art, and Industry, as far as by it he hurts not the Society, or any members of it, by taking from any Member or by

hindering him from enjoying what he himself enjoys.” Cato was the pseudonym for two British writers, John Trenchard and Thomas Gordon. Their co-authored *Cato’s Letters* (1720–1723) were widely read in the American colonies.

On the eve of the American Revolution, then, the received understanding of liberty in the Anglo-American world was a powerful amalgam of both the English common law and the liberal ideas of writers like Locke and Cato. On this view, liberty meant being able to act freely, secure in your basic rights, unhindered by the coercive actions of others,

and subject only to the limitation of such laws as you have consented to. Central to this idea of liberty was the right to hold property and to have it secure from arbitrary seizure. In addition, under the influence of Locke, liberty was increasingly being seen on

both sides of the Atlantic as a universal right, one not limited to English subjects. Equally influential was Locke’s argument that if a government violated its citizens’ liberty the people could resist the government’s edicts and create a new political authority. However, despite the gains that had been made since the seventeenth century, many Englishmen in the eighteenth century still worried that liberty was fragile and would always be endangered by the ambitions of powerful men.

Since the first settlements were established in the early seventeenth century, the American colonists shared in this English understanding of liberty. In particular, they believed that they had taken their English rights with them when they crossed the Atlantic. It was on the basis of these rights that they made a case for their freedom as colonists under the Crown. In addition, in the eighteenth century, the colonists were increasingly influenced by the Lockean idea that liberty was a natural right. As a result, when they were confronted with the policies of the British Crown and Parliament in the 1760s and 1770s to tax and legislate for them without their consent, the colonists viewed them as an attack on their liberty.

In response, the colonists argued that these British taxes and regulations were illegal because they violated fundamental rights. They were particularly resistant to the claims of the British Parliament, as expressed in the Declaratory Act of 1766, to legislate for the colonies “in all cases whatsoever.” By 1774, following the Boston Tea Party organized by Samuel Adams and John Hancock, and the subsequent

*No ideal was proclaimed more often
in the eighteenth-century
Anglo-American world than liberty.*

Coercive Acts, many leading colonists such as Thomas Paine and James Otis argued that they had a natural right to govern themselves, and that such a right was the only protection for their liberty. In addition to several essays in defense of rights, including *Letters from a Farmer in Pennsylvania*, John Dickinson wrote the first patriotic song, “The Liberty Song.”

This colonial thinking about liberty and rights culminated in the Declaration of Independence issued by the Continental Congress in 1776, which proclaimed that, because their liberty was endangered, the colonists had a natural right to resist the English King and Parliament.

Having made a revolution in the name of liberty, the American challenge was to create a form of government that preserved liberty better than the vaunted British constitution had done. In doing so, the founders turned to the ancient ideal of republican self-government, arguing that it alone could preserve the people’s liberty. They further argued that the modern understanding of liberty as the possession of rights needed to be a central part of any proper republican government. Beginning in 1776, in the midst of the Revolutionary War, all of the former colonies began to construct republican governments which rested on the people’s consent and which included bills of rights to protect the people’s liberty.

Since there was widespread consensus among the Founders that liberty required the protection of rights and the rule of law, much of the political debate in the crucial decades following the American Revolution revolved around the question of which institutional arrangements best supported liberty. Was liberty best protected by strong state governments jealously guarding the people’s liberties from excessive federal authority, as leading Anti-Federalists like George Mason contended; or, was an extended federal republic best able to preserve the freedom of all, as leading Federalists like James Madison and Alexander Hamilton argued?

The era of the American Revolution also gave birth to a further series of important debates about liberty. Was slavery, as some Americans in the eighteenth century were beginning to recognize, an unjust infringement upon the liberty of African Americans? Were women, long deprived of basic legal rights, also entitled to have equal liberty with their male fellow citizens? By making a Revolution in its name, the Founders ensured that debates about the nature and extent of liberty would remain at the center of the American experiment in self-government.
